ENERGY POLICY

As Diler Iron & Steel and Yazıcı Iron & Steel (DNA), we aim to minimize our environmental impact, use resources efficiently, and achieve our sustainability goals by utilizing energy sources effectively and sustainably. Under the leadership of our senior management, we adopt a systematic and continuous improvement approach across all our operations to enhance energy efficiency, optimize energy consumption, and ensure the efficient use of energy.

In this regard, we declare our commitment to fulfilling the following:

- Compliance with legal and other requirements: Ensuring full compliance with all applicable national and international energy-related regulations, legislations, and sectoral best practices.
- Energy efficiency and resource utilization: Prioritizing the most efficient and environmentally friendly energy sources in our procurement processes by considering energy efficiency criteria. Establishing energy efficiency as a fundamental criterion in new investments and equipment selection, while implementing modernization and optimization initiatives in existing systems to reduce energy losses. Prioritizing products and services with energy-saving potential in our purchasing decisions to achieve our sustainability goals.
- Continuous improvement of energy performance and EnMS (Energy Management System): Developing innovative technologies and methods to minimize energy consumption in production processes and continuously improving energy-intensive systems.
- Monitoring and analysis: Conducting periodic performance measurements in line with our energy objectives and goals, regularly analyzing our energy consumption, and implementing improvement actions.
- Employee awareness and training: Organizing continuous training programs to enhance our employees' awareness of energy management, fostering awareness of energy efficiency, and collaborating with all stakeholders to develop joint solutions.
- Reducing environmental impact: Minimizing the environmental impacts of energy use by reducing carbon emissions and conserving natural resources.
- Collaboration with suppliers and business partners: Encouraging our suppliers and business partners to improve energy efficiency and promoting a sustainable production approach.
- Providing necessary resources and information: Ensuring the availability of necessary information and resources to achieve our energy targets.

We are committed to taking the necessary steps to ensure that our energy efficiency policy is communicated, understood, and effectively implemented by all our employees and business partners

Within the scope of this commitment, we pledge to continuously review our energy policy and persistently pursue improvement efforts.
